1000 Litre Highway Model

The durable impact resistant polythene tank comes complete with a Robin Petrol Engine Water Pump, delivering 45 litres of water per minute, with a maximum head of 15 metres, which is more than adequate for most applications. A caged stand on platform and an extended lance means this unit is versatile enough to deliver water to the highest hanging basket or flower display.

The water can also be dispensed by gravity from a hosepipe to water at ground level.

The tank has a lockable tamper proof

lid, covering the 400mm - diameter access hatch, which incorporates the filler point and vent. The polythene tank is mounted on a galvanised chassis unit, manufactured from Rolled Hollow Section, fitted with a single leaf-spring suspension axle. The unit is manufactured to full highway specification, with overrun and lockable parking brakes. Two 185 x 14" x 8 ply wheels and tyres will be fitted, underneath plastic mudguards

The hydraulically damped towing unit will be supplied with an eye or

ball hitch (to suit your towing vehicle) with a telescopic jockey wheel, and a prop stand will be fitted to the rear of the unit. A sight contents gauge giving a clear indication to the level of water will be supplied as standard. In addition, our standard lighting board will be fitted, wired through the chassis and connected with an international 7-pin plug.
